Project Backlog

(APPLICATION DEVELOPMENT STUDIO)

--- Yap Zong Xin, Keertikaa Manogarann, Lim Pei Xian ---

Priority	Items	Effort
1	**I want** to clone the GitHub repository **so that** I can start working on my assignment.	1
2	**I want** to create a project board on GitHub **so that** I can maintain an organised to do list.	2
3	**I want** to create tables on elephantSQL **so that** I can start creating the APIs.	2
4	**I want** to create the functions in database.js **so that** I can start working on the APIs.	5
5	**I want** to create the APIs on app.js **so that** the virtual queue system works.	5
6	**I want** to implement json schema validation **so that** the correct parameters are passed.	3
7	**I want** to create error handler functions **so that** the various errors are accurately displayed.	3
8	**I want to** create test cases **so that** I can ensure that my virtual queue system is working properly.	3
9	**I want** to execute the test cases **so that** I can find the bugs in my code.	2
10	**I want** to fix the bugs found so that my virtual queue systems operate correctly.	4
